Right to work: UK Graduate Visa valid until Nov 2027; no current sponsorship required

EDUCATION

University of Greenwich

London, United Kingdom

Bachelor of Engineering in Software Engineering (First Class Honours)

September 2022 - May 2025

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL
Frameworks & Libraries: React.js, Next.js, Node.js, Flask, Jest, JUnit, Mockito
Cloud & DevOps: GitHub Actions (CI/CD), AWS, Vercel, Render, Git
Developer Tools & APIs: RESTful APIs, TCP/IP Sockets, Postman, VS Code, Maven
Databases: PostgreSQL, MongoDB

PROJECTS

VS Code Portfolio | [Live Demo](#) | [GitHub](#) *Next.js, React.js, TypeScript, Tailwind CSS, Framer Motion, Git*

- Built a VS Code-inspired portfolio in Next.js, React, and TypeScript, presenting content in an IDE-style interface with animated tabs, resizable panels, and a simulated extensions marketplace.
- Integrated the GitHub API to surface live repository data, built an in-browser terminal with command parsing and arrow-key history, and added mobile swipe gestures and Framer Motion-powered UI animations.
- Designed a 7-theme CSS variable system with real-time switching and localStorage persistence, then deployed the site to Vercel and released it as a documented open-source template.

GrowAhead | [Live Demo](#) | [GitHub](#) *Next.js 15, React.js, TypeScript, Node.js, PostgreSQL, Vercel*

- Built a full-stack investment simulation platform in Next.js, TypeScript, Node.js, and PostgreSQL, implementing financial business logic including roundup-based transaction processing and long-term portfolio projections.
- Developed secure authentication flows with JWT-based access control, email verification via SendGrid, and protected routing, ensuring only authenticated users could access transaction and portfolio endpoints.
- Strengthened reliability with 78 Jest tests and a GitHub Actions CI pipeline; diagnosed and resolved an HTTPS mixed-content issue encountered during initial AWS deployment.

VisionTech | [Live Demo](#) | [GitHub](#) *Flask, Gemini, MongoDB Atlas, React.js, Vercel, Render, GitHub Actions*

- Developed an AI powered e-commerce platform in React and Flask (Python), structuring the backend with a three-layer design to separate routing, business logic, and data access for maintainability and feature delivery.
- Integrated Google Gemini into the product flow, iterating on system instructions and validating every recommendation against the live product catalog before it reached the user.
- Deployed the application through GitHub Actions CI/CD across Vercel and Render, validating real-world integration behaviour across MongoDB Atlas and Gemini endpoints end to end.

WORK EXPERIENCE

Student Centre Advisor

August 2025 - September 2025

University of Greenwich

London, United Kingdom

- Managed student registration, system access and fee-related issues, coordinating with IT, Finance and academic teams to resolve complex cases efficiently.

UK Student Recruitment Ambassador

July 2024 - September 2025

University of Greenwich

London, United Kingdom

- First point of contact for prospective students, handling high-volume enquiries via phone, email and live chat and providing clear guidance on courses, entry requirements and university processes.
